Unit crc

Description 1.1

CRC generation unit

CRC generation routines, compatible with ISO 3309 and ITU-T-V42.

1.2 Overview

UpdateCrc32

Functions and Procedures 1.3

UpdateCrc32 function _____

Declaration function UpdateCrc32(InitCrc:longword; b: byte):longword;

Description Routine to get the CRC-32 value. Normally to be compatible with the ISO 3309 standard,

the first call to this routine should set InitCRC to \$FFFFFFFF, and the final result of the

CRC-32 should be XOR'ed with \$FFFFFFF.

Parameters InitCRC The value of the previous CRC

b The data byte to get the CRC-32 of

Returns The updated CRC-32 value

1.4 Author

Unit dpautils

2.1 Description

Delphi/Kylix compatbility unit

This unit includes common definitions so that common code can be compiled under the Delphicompilers. It supports Delphi 6 and higher that are targeted for Win32 as well as WDOSX/DOS.

2.2 Author

Unit fpautils

3.1 Description

Free Pascal compatibility unit

This unit includes common definitions so that common code can be compiled under the Free pascal compilers. It supports Freepascal 1.0.6 and higher (all targets).

3.2 Author

Unit locale

4.1 Description

Localisation unit

This unit is used to convert different locale information. ISO Standards are used where appropriate. Credits where credits are due, information on the ISO and date formats where taken from

4.2 Overview

GetISODateString

GetISOTimeString

UNIXToDateTime

4.3 Functions and Procedures

GetISODateString function
 Declaration function GetISODateString(Year, Month, Day: Word): shortstring;
 Description Returns the preferred date string as recommended by ISO 8601 (Gregorian Calendar). Returns an empty string if there is an error.
 Parameters year Year of the date - valid values are from 0000 to 9999

 month Month of the date - valid values are from 0 to 12
 day Day of the month - valid values are from 1 to 31

GetISOTimeString function _____

 $\textbf{Declaration} \hspace{0.2cm} \textbf{function} \hspace{0.2cm} \textbf{GetISOTimeString(Hour, Minute, Second: Word; UTC: Boolean):} \\$

shortstring;

Description Returns the preferred time string as recommended by ISO 8601 (Gregorian Calendar). .

Returns Empty string if there is an error

UNIXToDateTime procedure _____

 $\textbf{Declaration} \ \ \, \texttt{procedure UNIXToDateTime(epoch: longword; var year, month, day, hour,} \\$

minute, second: Word);

Description Converts a UNIX styled time (the number of seconds since 1970) to a standard date and time

representation.

4.4 Author

Unit tpautils

5.1 Description

Turbo Pascal 7 Compatibility unit

This unit includes common definitions so that common code can be compiled under the Turbo/Borland pascal compilers. It supports both Turbo Pascal 7.0 and Borland Pascal 7.0 and higher.

5.2 Author

Unit unicode

6.1 Description

unicode support unit

This unit contains routines to convert between the different unicode encoding schemes. All unicode strings are limited to 255 characters. Since all these encoding are variable length, except the UTF-32 and UCS-2 encoding, to parse through characters, every string should be converted to UTF-32 or UCS-2 before being used. UCS-2 is encoded in network byte order (big-endian).

6.2 Overview

ConvertFromUTF32 Convert an UTF-32 string to a single byte encoded string
ConvertToUTF32 Convert a byte encoded string to an UTF-32 string
ConvertUTF16ToUTF32 Convert an UTF-16 string to an UTF-32 string
ConvertUTF32ToUCS2 Convert an UTF-32 string to an UCS-2 string
ConvertUTF32toUTF16 Convert an UTF-32 string to an UTF-16 string
convertUTF32toUTF8 Convert an UTF-32 string to an UTF-8 string
ConvertUTF8ToUTF32 Convert an UTF-8 string to an UTF-32 string
lengthUTF16 Returns the current length of an UTF-16 string
lengthutf32 Returns the current length of an UTF-32 string
lengthutf8 Returns the current length of an UTF-8 string
setlengthUTF16 Set the length of an UTF-16 string
setlengthUTF16 Set the length of an UTF-8 string

6.3 Functions and Procedures

ConvertFromUTF32 function _

Declaration function ConvertFromUTF32(source: utf32string; var dest: shortstring; desttype: string): integer;

Description Convert an UTF-32 string to a single byte encoded string

This routine converts an UTF-32 string stored in native byte order (native endian) to a single-byte encoded string. The string is limited to 255 characters, and if the conversion cannot be successfully be completed, it gives out an error. The following desttype can be specified: ISO-8859-1, windows-1252, ISO-8859-2, ISO-8859-5, ISO-8859-16, macintosh, atari, cp437, cp850, ASCII.

Parameters desttype Indicates the single byte encoding scheme

Returns UNICODE_ERR_OK(6.5) if there was no error in the conversion

ConvertToUTF32 function ___

Declaration function ConvertToUTF32(source: shortstring; var dest: utf32string; srctype: string): integer;

Description Convert a byte encoded string to an UTF-32 string

This routine converts a single byte encoded string to an UTF-32 string stored in native byte order The string is limited to 255 characters, and if the conversion cannot be successfully be completed, it gives out an error. The following srctype can be specified: ISO-8859-1, windows-1252, ISO-8859-2, ISO-8859-5, ISO-8859-16, macintosh, atari, cp437, cp850, ASCII.

Parameters srctype Indicates the single byte encoding scheme

Returns UNICODE_ERR_OK(6.5) if there was no error in the conversion

ConvertUTF16ToUTF32 function _

Declaration function ConvertUTF16ToUTF32(src: array of utf16; var dst: utf32string): integer;

Description Convert an UTF-16 string to an UTF-32 string

This routine converts an UTF-16 string to an UTF-32 string. Both strings must be stored in native byte order (native endian).

Returns UNICODE_ERR_OK(6.5) if there was no error in the conversion

ConvertUTF32ToUCS2 function _____ Declaration function ConvertUTF32ToUCS2(src: array of utf32; var dst: ucs2string): integer; **Description** Convert an UTF-32 string to an UCS-2 string This routine converts an UTF-32 string to an UCS-2 string that is stored in network byte order (big-endian). If some characters could not be converted an error will be reported. **Returns** UNICODE_ERR_OK(6.5) if there was no error in the conversion ConvertUTF32toUTF16 function _____ Declaration function ConvertUTF32toUTF16(src: array of utf32; var dest: utf16string): integer; **Description** Convert an UTF-32 string to an UTF-16 string This routine converts an UTF-32 string to an UTF-16 string. Both strings must be stored in native byte order (native endian). **Returns** UNICODE_ERR_OK(6.5) if there was no error in the conversion convertUTF32toUTF8 function _____ Declaration function convertUTF32toUTF8(s: array of utf32; var outstr: utf8string): integer; **Description** Convert an UTF-32 string to an UTF-8 string ConvertUTF8ToUTF32 function _____ Declaration function ConvertUTF8ToUTF32(src: array of utf8; var dst: utf32string): integer; **Description** Convert an UTF-8 string to an UTF-32 string This routine converts an UTF-8 string to an UTF-32 string that is stored in native byte order. Returns UNICODE_ERR_OK(6.5) if there was no error in the conversion lengthUTF16 function _____ Declaration function lengthUTF16(s: array of utf16): integer; **Description** Returns the current length of an UTF-16 string lengthutf32 function _____ Declaration function lengthutf32(s: array of utf32): integer;

Description Returns the current length of an UTF-32 string

```
lengthutf8 function _____
Declaration function lengthutf8(s: array of utf8): integer;
Description Returns the current length of an UTF-8 string
setlengthUTF16 procedure _____
Declaration procedure setlengthUTF16(var s: array of utf16; 1: integer);
Description Set the length of an UTF-16 string
setlengthUTF8 procedure _____
Declaration procedure setlengthUTF8(var s: array of utf8; 1: integer);
Description Set the length of an UTF-8 string
6.4
      Types
utf8 _
Declaration utf8 = char;
Description UTF-8 base data type
utf16 _____
Declaration utf16 = word;
Description UTF-16 base data type
utf32 _
Declaration utf32 = longword;
Description UTF-32 base data type
ucs2 _____
Declaration ucs2 = word;
Description UCS-2 base data type
ucs2string _
Declaration ucs2string = array[0..255] of ucs2;
Description UCS-2 string declaration. Index 0 contains the active length of the string in characters.
```

utf32string _____ Declaration utf32string = array[0..255] of utf32; **Description** UTF-32 string declaration. Index 0 contains the active length of the string in characters. utf8string _____ Declaration utf8string = array[0..1024] of utf8; **Description** UTF-8 string declaration. Index 0 contains the active length of the string in BYTES utf16string _____ Declaration utf16string = array[0..255] of utf16; **Description** UTF-16 string declaration. Index 0 contains the active length of the string in BYTES Constants 6.5UNICODE_ERR_OK ____ Declaration UNICODE_ERR_OK = 0; **Description** Return status: conversion successful UNICODE_ERR_SOURCEILLEGAL ____ Declaration UNICODE_ERR_SOURCEILLEGAL = -1; **Description** Return status: source sequence is illegal/malformed UNICODE_ERR_LENGTH_EXCEED _____ Declaration UNICODE_ERR_LENGTH_EXCEED = -2; **Description** Return status: Target space excedeed UNICODE_ERR_INCOMPLETE_CONVERSION _____ Declaration UNICODE_ERR_INCOMPLETE_CONVERSION = -3; Description Return status: Some character could not be successfully converted to this format UNICODE_ERR_NOTFOUND ____

Declaration UNICODE_ERR_NOTFOUND = -4;

Description Return status: The character set is not found

6.6 Author

Unit utils

7.1 Description

General utilities common to all platforms.

7.2 Overview

EscapeToPascal

FileExists Verifies the existence of a filename

hexstr Convert a value to an ASCII hexadecimal representation

Printf Format a string and print it out to the console

StreamErrorProcedure Generic stream error procedure

SwapLong Change the endian of a 32-bit value

SwapWord Change the endian of a 16-bit value

TrimLeft Remove all whitespace from the start of a string

TrimRight Remove all whitespace from the end of a string

UpString Convert a string to uppercase ASCII

ValBinary

ValDecimal

ValHexadecimal

ValOctal

7.3 Functions and Procedures

EscapeToPascal function _____

Declaration function EscapeToPascal(const s:string; var code: integer): string;

Description Converts a C style string (containing escape characters), to a pascal style string. Returns the converted string. If there is no error in the conversion, code will be equal to zero.

Parameters s String to convert

code Result of operation, 0 when there is no error

FileExists function _

Declaration Function FileExists(FName : string): Boolean;

Description Verifies the existence of a filename

This routine verifies if the file named can be opened or if it actually exists. FName Name of the file to check Returns FALSE if the file cannot be opened or if it does not exist.

hexstr function _____

Declaration function hexstr(val : longint; cnt : byte) : string;

Description Convert a value to an ASCII hexadecimal representation

Printf function _

Declaration function Printf(const s : string; var Buf; size : word): string;

Description Format a string and print it out to the console

This routine formats the string specified in s to the format specified and returns the resulting string. The following specifiers are allowed: %d: The buffer contents contains an integer %s: The buffer contents contains a string, terminated by a null character. %bh: The buffer contents contains a byte coded in BCD format, only the high byte will be kept. %bl: The buffer contents contains a byte coded in BCD format, only the low byte will be kept. s The string to format, with format specifiers buf The buffer containing the data size The size of the data in the buffer Returns The resulting formatted string

StreamErrorProcedure procedure ___

Declaration procedure StreamErrorProcedure(Var S: TStream);

Description Generic stream error procedure

Generic stream error procedure that can be used to set streamerror

SwapLong procedure _____ Declaration Procedure SwapLong(var x : longword); **Description** Change the endian of a 32-bit value SwapWord procedure _____ Declaration Procedure SwapWord(var x : word); **Description** Change the endian of a 16-bit value TrimLeft function _____ Declaration function TrimLeft(const S: string): string; **Description** Remove all whitespace from the start of a string TrimRight function _____ Declaration function TrimRight(const S: string): string; **Description** Remove all whitespace from the end of a string UpString function _____ Declaration function UpString(s : string): string; **Description** Convert a string to uppercase ASCII ValBinary function _____ Declaration function ValBinary(const S:String; var code: integer):longint; **Description** Convert a binary value represented by a string to its numerical value. If there is no error, code will be equal to zero. ValDecimal function _____ Declaration function ValDecimal(const S:String; var code: integer):longint; **Description** Convert a decimal value represented by a string to its numerical value. If there is no error, code will be equal to zero. ValHexadecimal function _____ Declaration function ValHexadecimal(const S:String; var code: integer):longint; Description Convert an hexadecimal value represented by a string to its numerical value. If there is no

error, code will be equal to zero.

ValOctal function	

Declaration function ValOctal(const S:String; var code: integer):longint;

Description Convert an octal value represented by a string to its numerical value. If there is no error, code will be equal to zero.

7.4 Author

Unit vpautils

8.1 Description

Virtual Pascal Compatibility unit

This unit includes common definitions so that common code can be compiled under the Virtual pascal compiler. It supports Virtual Pascal 2.1 and higher for the Win32, DOS and OS/2 targets.
